Negative index metamaterial Wikipedia

January 18th, 2019 - Negative index metamaterial or negative index material NIM is a metamaterial whose refractive index for an electromagnetic wave has a negative value over some frequency range. NIMs are constructed of periodic basic parts called unit cells which are usually significantly smaller than the wavelength of the externally applied electromagnetic radiation. The unit cells of the first

Superlens Wikipedia

January 16th, 2019 - A superlens or super lens is a lens which uses metamaterials to go beyond the diffraction limit. The diffraction limit is a feature of conventional lenses and microscopes that limits the fineness of their resolution. Many lens designs have been proposed that go beyond the diffraction limit in some way but constraints and obstacles face each of them

Explorer Smart Materials SBI

January 17th, 2019 - Smart materials produce direct inherent physical responses to signals such as temperature voltage pressure magnetic fields light and so on. Though the mechanical behavior of an SM actuator often is unimpressive in isolation the ability to use a very simple device to produce specific mechanical action in response to specific conditions or

signals can dramatically improve the overall
